

Experiment 10:-

Aim:-

To create a cloning of a VM and test it by loading the previous version/ cloned VM.

Requirements:-

VMware Workstation.

Procedure:-

1. Install VM Workstation.
2. Start to create a new Virtualisation Machine.
3. Configure the settings, assign the required memory & processors.
4. Then, after creating it, by this previous version/ cloned VM.
5. We have to clone the VM to start cloning.
6. For cloning the system should be off mode.
7. It will take a while & clone the whole VM exactly.

Result:

creating a clone VM is successful by using

VMware software
