

Experiment 6: To demonstrate Virtualization by Installing

Type-2 hypervisor in your device, create & configure VM image & host operating system.

Requirements:

VMware workstation.

Procedures:

1. Install VMware workstation.
2. Choose to create a Virtual Machine.
3. We will have access to create different OS.
4. We have to choose the OS. I am gonna choose Windows 10.
5. Then create a new virtual disk.
6. Give the required capacity of memory & required No. of Processors.
7. Then, we have to finish the processing & start booting the OS.
8. If we want to do any changes we have to power off the system.

Result:

The VM for windows 10 is successfully created.

Powered Off

New Settings Discard Start

General

Name: sainadh2
Operating System: Windows 11 (64-bit)

System

Base Memory: 2048 MB
Processors: 2
Boot Order: Floppy, Optical, Hard Disk
EFI: Enabled
Acceleration: VT-x/AMD-V, Nested Paging, Hyper-V Paravirtualization

Display

Video Memory: 128 MB
Graphics Controller: VBoxSVGA
Remote Desktop Server: Disabled
Recording: Disabled

Storage

Controller: SATA
SATA Port 0: sainadh2.vhdx (Normal, 15.00 GB)
SATA Port 1: [Optical drive] Empty

Audio

Network

Adapter 1: Intel PRO/1000 MT Desktop (NAT)

USB

USB Controller: OHCI
Device Filters: 0 (0 active)

Shared folders

None

Description

None
